## Solar Energy Electrician (Journeyman or Master Electrician)

### Job Description

The primary job responsibility is to run DC conduit, wire and cable from photovoltaic modules to inverters and AC conduit, wire and cable from inverter to the electrical interconnection for commercial and residential sites. The position requires following schematics, written instructions and verbal directions. You should have some experience working with electrical service equipment, meter sockets, etc.

Ideal position for a person who is hands-on, mechanically inclined and self-motivated.

In addition to requiring a journeyman license (or the ability to obtain one within a few months), previous solar and/or construction experience and training would be a plus.

### Benefits Package

- Excellent GHC health insurance – we cover 75% of the individual plan, 30% of the family plan.
- Excellent Delta dental insurance – we pay 75% of the individual plan rate towards your dental insurance.
- 3% match towards IRA, starting January 1st after hire.
- 25% accrual of paid time off. Works out to about 3 weeks per year.
- Generous year-end bonuses, based on profits and hours worked.
- Paid education opportunities
- Solar installation on your home at cost

Job Type: Full-time

Salary: \$25.00 to \$35.00 /hour
